Harry Reintsema,
Maxillofacial prosthodontist, DDS, PhD

www.congresbacktothefuture.com

Welcome

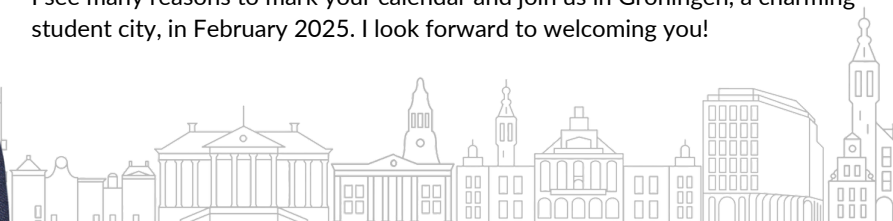

I warmly invite you to the upcoming conference at UMCG, focusing on the latest advancements in treating congenital and acquired oral, head, and neck conditions. This event is particularly significant to me as I approach retirement after over 40 years of dedication to multidisciplinary care, helping patients reintegrate into normal life.

Throughout my career, I've witnessed the rise of true multidisciplinary care, where maxillofacial prosthodontics and patient involvement have become integral to treatment. Implantology and digital technology have revolutionized maxillofacial rehabilitation, enhancing patients' quality of life.

As we continue to advance, it's crucial to share our knowledge globally e.g. by conferences. The UMCG has a strong tradition of hosting such conferences, and I'm honored to be part of the organizing committee. I eagerly anticipate reconnecting with colleagues and friends from around the world.

The conference will feature two days of keynote and free paper presentations, discussions on topics such as maxillary and mandibular reconstruction, facial prosthetics, complex implantology, and multidisciplinary care for congenital disorders. A poster session will also be held, with the winner gaining a presentation spot. Preceding the conference, three workshops will be held on February 27th: zygomatic implant planning, complex digital implantology, and pre-radiation dental treatment planning.

I see many reasons to mark your calendar and join us in Groningen, a charming student city, in February 2025. I look forward to welcoming you!
